

# nClient for Education

## Protection On and Off Network

### Safeguard Students Anywhere, Across All Devices, All Platforms

Netsweeper's nClient extends our core nFilter web filtering, monitoring, and policy management capabilities to remote devices. The two products work together seamlessly, so administrators can easily manage all devices from a central source with zero impact on network latency. Compatible with every device and operating system, nClient maintains the same level of protection on and off network to ensure policy and regulatory compliance and prevent harmful content from reaching your students. Never feel pressured to choose between educational online content or student protection when Netsweeper's nClient offers both.

“ You’ve (Netsweeper) been entirely responsive to our needs, and that’s from scoping out initially what we wanted, through the implementation side of things. ”

Nick Finch, Regional Lead, Co-op Academies Trust

### AI-Enhanced, Real-Time Categorisation

In a world where millions of URLs are created every day, we find new content first with real-time analysis that is often missed by other security and filtering products. Through AI technology and 20+ years of experience, we continuously analyse and categorise content across over 90 categories and 47 languages to ensure students are always protected.

### Multi-Tenant Solution

Multiple schools can be managed through one interface giving IT administrators the ability to create their own filtering policies and generate reports for their schools. Designed to provide top-down visibility at all levels, along with customised, granular, and flexible control over content filtering features of each tenant's own instance.

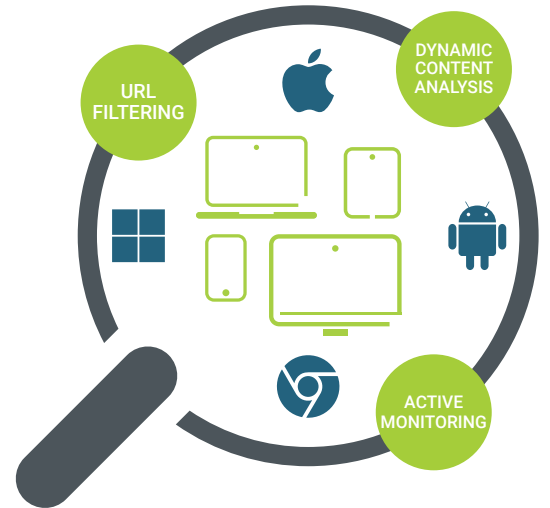

### In-Depth Reporting

Why settle for generic insights when you can get tailored and comprehensive reports that examine every aspect? We offer straightforward templates, scheduling options, and customisable reports that delve deeper into data. This rapid but detailed analysis of online activity gives you all the crucial information you need to protect your students.

# The Netsweeper Difference

## Elevate Protection with Device-Level Filtering

Netsweeper's web content filtering solution offers a comprehensive approach that extends well beyond the capabilities of a simple safe search browser. nClient provides device-level filtering, ensuring a safe and controlled online environment for students. Unlike basic safe search settings, Netsweeper's advanced technology employs URL filtering, dynamic content analysis, and active monitoring. This enables the system to not only block explicit content but also identify and prevent access to inappropriate materials across websites, applications, and multimedia content.

## Key Features

### Full SSL Decryption

Rather than filtering only top-level domains, block prohibited content and enhance student safety by monitoring network activity at a granular level.

### All Devices & Platforms

nClient can be installed on Windows, OSX, Chrome, iOS, and Android devices, monitoring internet traffic even when they are not connected to the school network.

### Flexible Social Media

Manage web and app-based activity on social media platforms like YouTube, Instagram, LinkedIn, and Facebook.

### Scalability

Regardless of size, we can scale to meet your needs without impacting speed or reliability.

### Customisable Control

Role-based access provides unique levels of control and security for every system user, including school, teacher, administration, and IT.

### Regulatory Compliant

Adhere seamlessly to regulatory requirements outlined by KCSIE, ensuring a safe and compliant digital environment.

## UK Cloud Services

Netsweeper's cloud-based filtering solution provides an ecosystem of protection that extends from your network to the client for complete protection whether students are in the school or learning from home. The flexible, scalable, and compatible features of our cloud-based internet filtering solution will enable your school to save money, improve security, and protect your students. Strategically designed for simple installation and management, nClient provides all the same protection and policies of a device on your internal network without bandwidth issues.
